R101 URBAN BLOCK

TEAM PROJECT WITH A.OUD A.ZALZMAN O.GULNEVA

TOWN MOBILE

Living modules hierarchy:

1. Avenue module. Vertical structure adjoining avenues or highways - a 16-story residential tower with attached multi-story onground parking. Built up with retail/commercial spaces on the avenue side (shops, restaurants and sport facilities working 24/7) and terraced to the courtyard with landscaped public spaces and playgrounds. Residential level area is 490 sq.m. 16 stories, 13 are residential. Full residential module area - 5390 sq.m, living area - 4040 sq.m.

2. Secondary street module. Multisectional apartment houses with different number of stories (9-13) forming secondary streets. Ground floor zones facing streets serve as communal and inner-district retail spaces rooming shops, drugstores and small cafes, forking 8-00 to 23-00. Lower levels facig courtyard serve to house handicapped persons or municipal housing needs. This modules may be joined by a parkinghouse with useable rooftop. Residential level area is 450 sq.m (one block). Full residential module area - 7650 sq.m (2 blocks) or 14300 sq.m. (4 blocks); living area - 6120/11840 sq.m.

3. Townhouse module. Vertically stratched row houses for large families, vertically stacked (townhouse over a townhouse) forming alley scales. Personal parking lots are provided for lower residences on the ground level; upper residences use secured parking area in the courtyard. Private landscaped rooftop is provided.

4. Innerblock parking module. Accessed from secondary streets in order to release traffic from alleys and to provide isolation for blocks' courtyards.

Proposals for block composition:

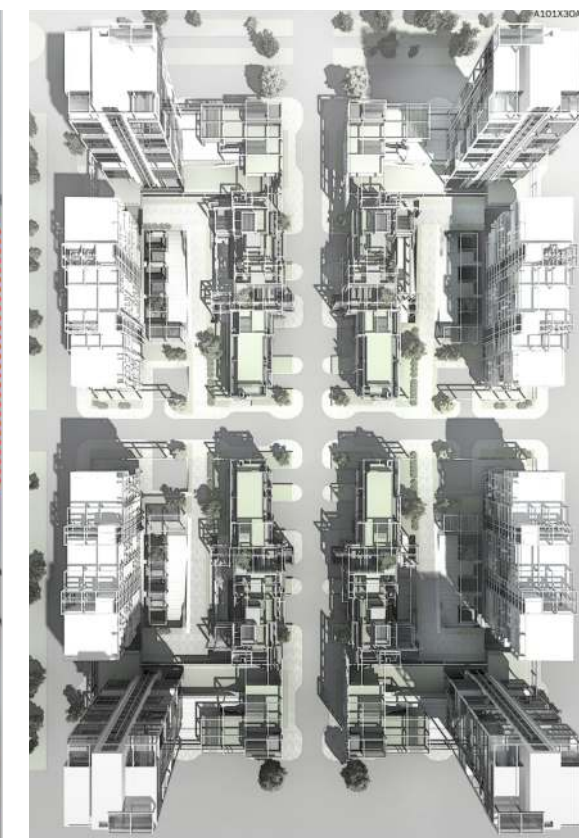

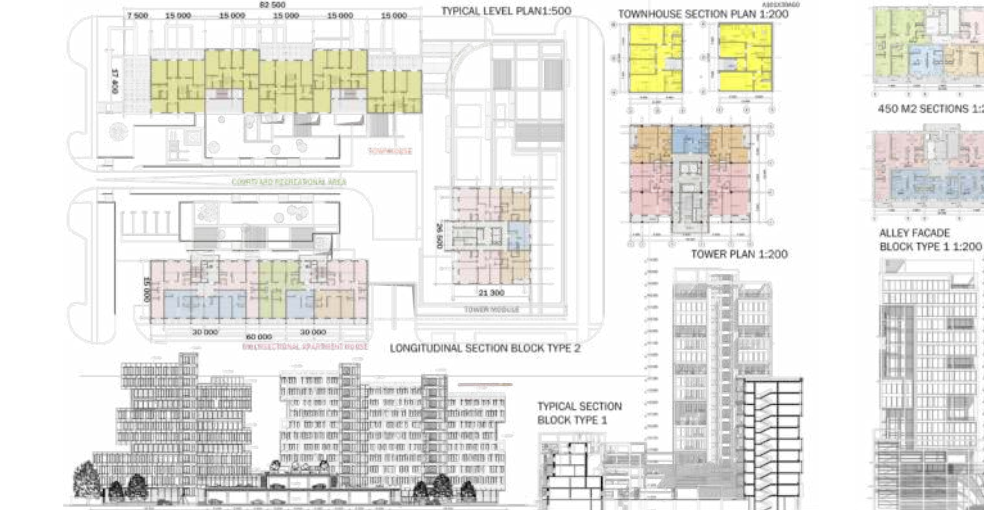

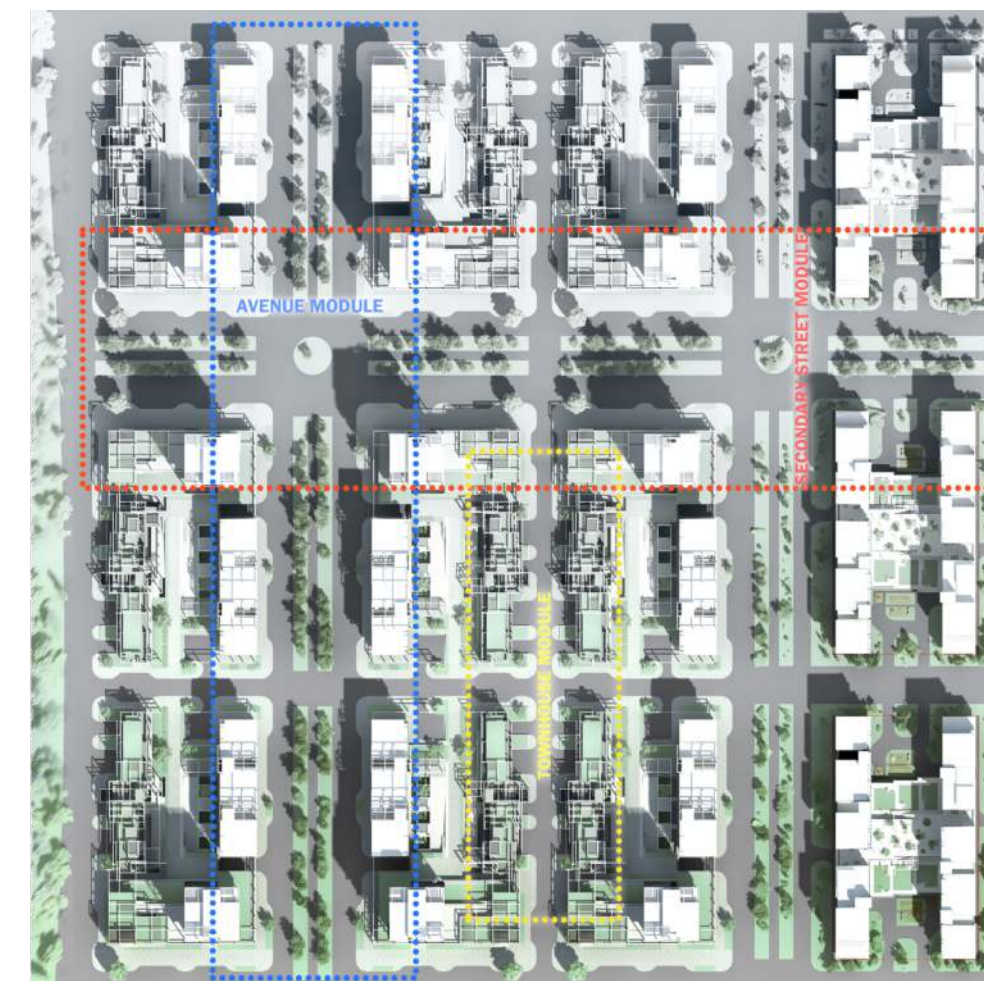

- Block facing arterial highway/avenue. Consists of all building modules. 4 blocks may be joined into a district with articulated spatial hierarchy. Density is dropped to the center of district. Full residential area of a single block is 16640 sq.m. Residential area is 13460 sq.m.

- Block between two secondary streets. Consists os two houses, 4 units each, joined by 2-story enclosed landscaped parking for 150 cars with an isolated courtyard on its roofings with access from the living blocks' staircases. This area plays as open public commonwealth area incorporating cafe and library situated on level 2. At the same time, this areas may be adjoined by bridges over roads to join blocks' public areas. Full residential area of a single block is 28600 sq.m. Residential area is 23680 sq.m.

- Townhouse block bordered by large green/recreational areas. Creates a gradient from urban development to landscaped zones Full residential area of a single block is 10560 sq.m. Residential area is 8450 sq.m.

Key features:

- modular, stack-ready
- well-oriented, fully insolated
- parkings provided
- spatial hierarchy providing different city scales
- economical, easy-to-carry-out design
- big area of greenery
- parkings treated as part of landscaped yard
- isolated commonwealth areas

Музейный комплекс состоит из двух основных блоков, соединенных между собой подземным и надземным переходами. Движение идет под Покровкой из второго блока в гостиницу Стасова, где по проекту колесо обозрения поднимает посетителя над районом улицы Покровки. Сама гостиница реконструируется и исполняет свою прежнюю функцию. Под комплексом предусмотрен подземный паркинг, заезд в который осуществляется с Покровского бульвара.
